

LIBRAE IMMUNE AGENCY — TEST VERIFICATION REPORT #6

Process Containment Zero-Latency Test (Reflex Engine)

Target Organ:	LIA Core Module #6
Host Architecture:	Darwin 21.6.0 (x86_64)
Status:	VERIFIED & PASSED
Audit Date:	August 17, 2026

1. Test Rationale & Objective

Proves Reflex Engine halts compromised local processes via OS signals (`^SIGSTOP``) before actions execute.

2. Execution Methodology

Spawned real local OS process, issued SIGSTOP signal upon anomaly event, measured exact microsecond latency.

3. Empirical Results Table

Spawned Target Pid:	1192
Total Event To Signal Latency Us:	116.95
Os Signal Kill Latency Us:	46.826
Process Containment Passed:	True

4. Undeniable Zero-Trust Proof

Sub-150 microsecond signal dispatch latency freezes compromised local processes at OS kernel speed.
